Summary

B.Tech CSE (AI/ML) student at BIT Mesra building scalable full-stack and AI-powered systems — multi-agent LLM pipelines, RAG architectures, and analytics platforms. Proficient in OOP, REST APIs, and CS fundamentals (OS, DBMS, CN, LLD). **Smart India Hackathon 2025 Winner (Top 0.1%)**; 1000+ DSA problems solved.

Technical Skills

- **Languages:** C++, SQL, JavaScript, TypeScript
- **Frameworks & Libraries:** React, Node.js, Express.js, FastAPI
- **AI/ML & LLMs:** LLM APIs (OpenAI/Gemini), RAG Pipelines, Multi-Agent Systems, DuckDB
- **Databases:** MongoDB, MySQL, PostgreSQL **Tools & Platforms:** Git, GitHub, Postman, Vercel, Docker
- **Coursework:** DSA, OOP, Operating Systems, DBMS, Computer Networks, System Design (LLD)

Education

Birla Institute of Technology Mesra

B.Tech in CSE (AI/ML) | CGPA: 8.57 | Class XII: 95.5% | Class X: 93%

Sep. 2023 – May 2027

Ranchi, Jharkhand

Experience

Software Development Engineer Intern

P2P Connect (Remote)

Jun 2024 – Jul 2024

[Internship Letter](#)

- Boosted AI-driven matchmaking alignment accuracy by **28%** by redesigning core matching logic and evaluation criteria.
- Cut chatbot response error rate by **18%** through systematic interaction analysis and targeted rule-based adjustments.
- Surfaced **50+ functional and UI bugs** via structured QA testing, directly improving platform stability and user experience.

Projects

DataTalk – Multi-Agent Data Analytics | ReactJS, TypeScript, Express.js, DuckDB, LLM APIs | [Demo](#) | [GitHub](#)

- Delivered **natural-language querying over 100K+ row datasets in under 15 seconds**, eliminating manual SQL/Python scripting entirely for non-technical users.
- Engineered **automatic query routing** across SQL, Python, and search agents on a **TypeScript + Express backend**; LLMs access schema metadata only — all execution runs locally via DuckDB for full data security.
- Built a **sandboxed Python execution environment** with strict resource controls for statistical analysis and chart generation, plus an interactive preprocessing pipeline with multi-table support.

Dhanalysis – Portfolio Analytics Platform | ReactJS, Node.js, Express.js, MongoDB, Firebase Auth | [Demo](#) | [GitHub](#)

- **Automated XIRR, CAGR, drawdown, and risk metric computation** across 20+ stocks, replacing hours of manual Excel work with instant, reliable results.
- Integrated **NIFTY 50 benchmarking** with rate-limited Yahoo Finance ingestion, cron-based automated reporting, and a portfolio-aware AI insight layer for contextual analysis.
- Implemented **Firebase Auth with JWT session management** supporting full multi-user portfolio isolation and scalable architecture.

CodeLearner – Code Navigation Platform | ReactJS, Node.js, Express.js, PostgreSQL, TypeScript | [Demo](#) | [GitHub](#)

- Reduced codebase onboarding time by **~65%** via GitHub repo ingestion and React Flow dependency graphs — replacing manual code reading.
- Built a **RAG-based AI assistant** (Perplexity API) for context-aware code Q&A grounded in the ingested repository, supporting **100+ files** per session.
- Engineered a **Tree-sitter AST parser** with function-level chunking; applied JWT auth, rate-limited APIs, and PostgreSQL-backed session persistence with OOP design principles.

Achievements

- **Smart India Hackathon 2025 Winner** – Top **0.1%** among **100,000+ teams** nationwide.
- **UIDAI Data Hackathon 2026 National Finalist** – Top **0.5%** nationwide.
- **Code For Purpose 2026 National Finalist** – Top **0.5%** among **5,000+ teams**.
- **Codeforces:** 1447 (Specialist) | **LeetCode:** 1842 (Top ~6%) | **1000+ DSA problems** solved across Codeforces, LeetCode, and GeeksforGeeks.
